

# HANA Update from 1.0 to 2.0

What is the best way of upgrading SAP HANA 1.0 to 2.0 Version. Another 2 ½ weeks months before end-of-maintenance of all (!) SAP HANA 1.0 and 2.0 release, except for SPS 05. 🗨

✓Refer to the post: <https://lnkd.in/e8hRT6k>

In the document it covers the 2-type HANA update:

- Normal upgrade-Single Tenant.
- HA Scenario-How to break the replication and perform upgrade in both system.

SAP note: 1948334 SAP HANA Database Update Paths for SAP HANA Maintenance Revisions.

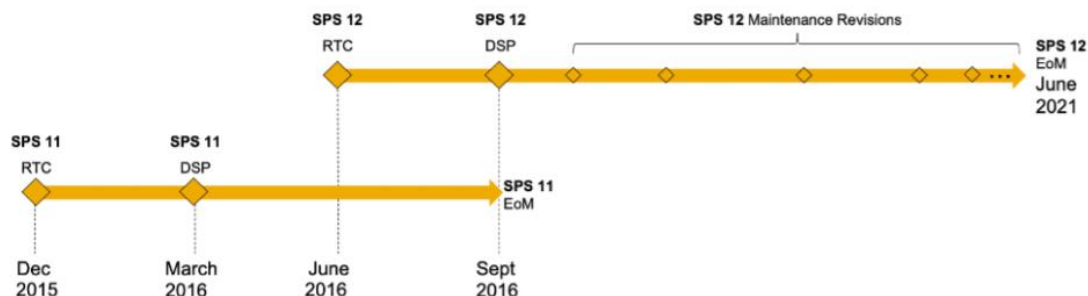

🗨 **Many of have queries who are running in lower version: ?**

- ✦ Customers on SAP HANA 1.0 with SPS10 can upgrade directly to SAP HANA 2.0
- ✦ Recommendation is first upgrade to SPS12 and continue with SAP HANA 2.0 upgrade
- ✦ If you are using SAP HANA 1.0 with the below SPS version from 10, then an SPS12 upgrade is mandatory before start the SAP HANA 2.0 upgrade

**With SAP HANA 2 - major changes:** 🗨

- ✦ The metadata persistence layout has been changed and
- ✦ An older column store persistence format has been deprecated and is not supported anymore.

🗨 SAP will provide Maintenance Revisions for SAP HANA 1.0 SPS12 for a period of 5 years after RTC. Maintenance Revisions for SAP HANA SPS12 are not scheduled and delivered on demand.

HANA 1.0 : Revision Strategy for the SAP HANA Platform (1.0)

## SAP HANA 2.0

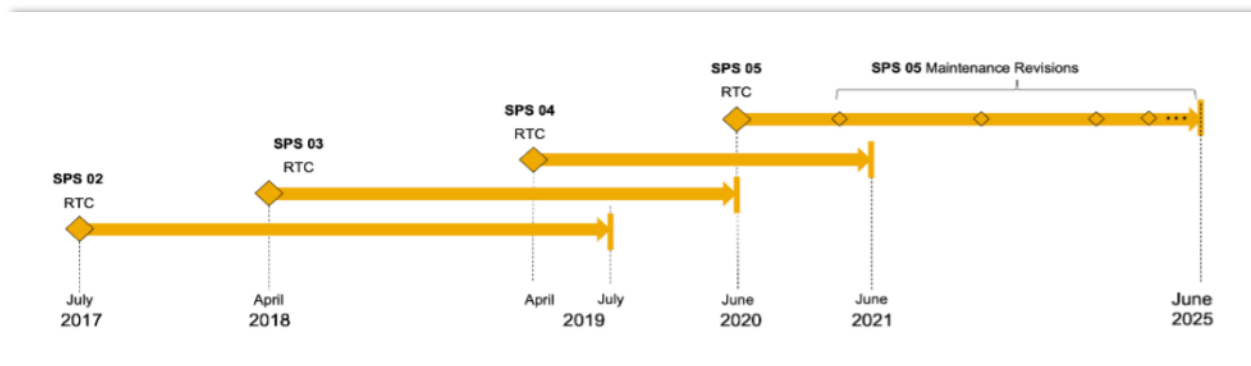

- Corrections

SAP will provide Maintenance Revisions for SAP HANA 2.0 SPS05 for a period of five (5) years after RTC. These Revisions after SPS05 are not scheduled but delivered on demand. Bug fixes and security patches are released for every Support Package Stack (SPS) for two (2) years after RTC.

- New capabilities

SAP will introduce new capabilities once a year, every time a new SAP HANA Support Package Stack (SPS) is released. An overview can be found in SAP HANA 2.0 Revision Strategy

An overview can be found in [SAP HANA 2.0 Revision Strategy](#)

SAP HANA Update Strategy Customers may opt to continue consuming maintenance revisions until end of provisioning or choose to upgrade to a new stack upon release. This decision depends on the individual and unique customer needs for adopting new features and capabilities of SAP HANA®.

Un-Planned Maintenance - Recommended path for production systems- SAP provides SAP HANA standard revisions until RTC of the following SPS. These standard revisions contain only incremental fixes. SAP provides SAP HANA maintenance revisions between RTC of the following SPS and end of maintenance of the current SPS. These maintenance revisions contain only major bug fixes, identified to be relevant in particular for production environments.

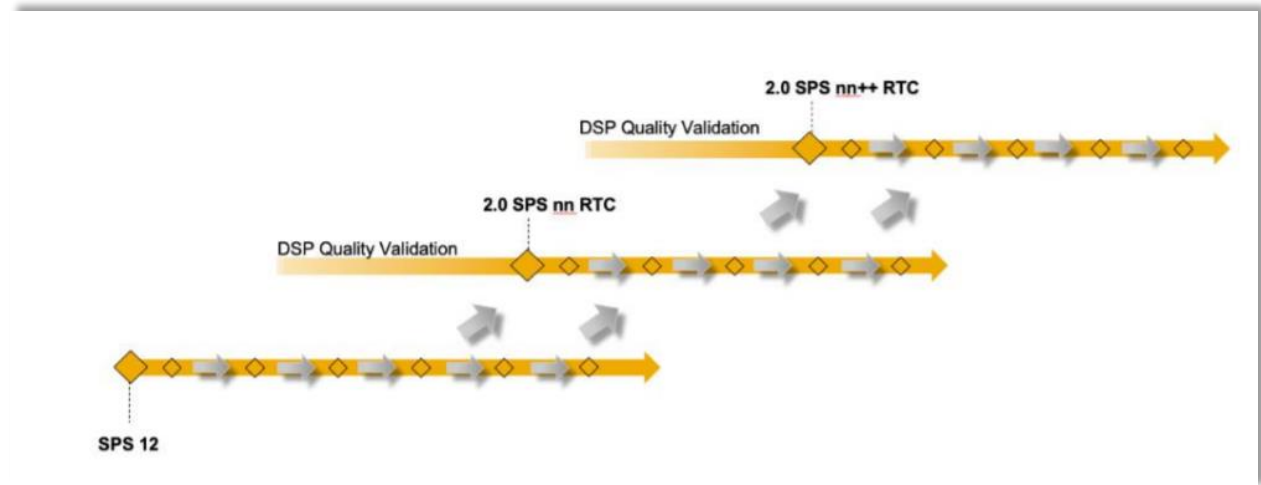

**Recommended path for production systems bug fixing, using SAP HANA Maintenance Revisions**

SAP recommends to always implement the latest SAP HANA revision available on SAP Service Marketplace to benefit from incremental, but non-disruptive improvements.

Planned Maintenance - Recommended path for production systems Customers can upgrade to any available revision of a new SPS at any point in time. Starting with SAP HANA 2.0 SPS00,

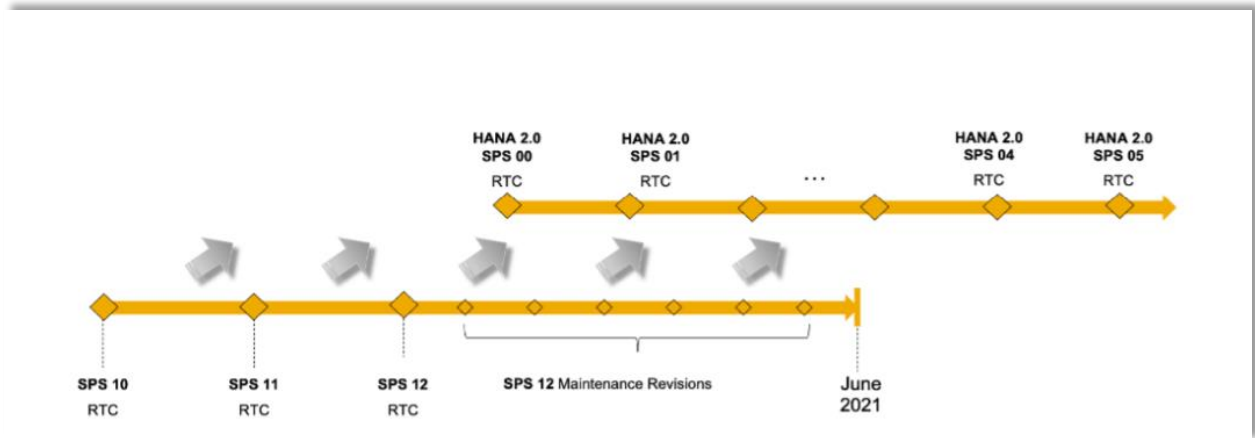

SAP will no longer explicitly declare a Datacenter Service Point (DSP) since SAP is running DSP qualification validation before RTC of a new SPS. DSP status is automatically given with RTC of the SPS. More information about DSP can be found in SAP Note 2021789.

Please see SAP Note 2021789 (HANA 1.0) and SAP Note 2378962(HANA 2.0) for further information.

### Upgrade Strategy for the SAP HANA Platform – HANA 1.0 to 2.0

SAP HANA 2.0 is upward compatible which means customers are able to perform a normal upgrade with no migration required. SAP HANA® systems running on HANA 1.0 SPS10 or newer may be upgraded to HANA 2.0 directly. SAP HANA systems running on HANA 1.0 SPS09 or lower, need to upgrade to a HANA SPS  $\geq$  SPS10 prior to upgrading to HANA 2.0. However, SAP recommends minimum start release HANA 1.0 SPS12 revision before upgrading to SAP HANA 2.0 to be able to use Capture & Replay tool for regression tests. Customers running mission critical systems may opt to stay on HANA 1.0 on SPS12 until June 2021.

See SAP Note 1948334 for possible update paths from maintenance revisions to support package revisions For more information, see SAP Note 2372809 (Mandatory Preparation Steps for Upgrading an SAP HANA 1 System to SAP HANA 2).

### Appendix: High level Steps:

1. Download the required software of HANA 2.0
2. Capturing Current status of HANA database technical details
3. Pre-Upgrade check as guidelines of SAP KBA
4. Perform Hana Upgrade from 1.0 to 2.0
5. Post Hana Upgrade technical Validation.
6. Adjust hdbuserstore setting on the Application server(If required).

**Agenda:** Update HANA from 1.0 to 2.0 where Application component are unchanged (**Please also refer PAM** )

#### Technical details of current Hana server:

Operating System: SLES 12 SP02  
 Database: HANA 1.0 SPS12 Revision 8(1.00.122.08.1490178281)  
 Hana environment: Single container  
 Application: NW 7.50 with Banking services 9.0 SPS 05

#### Target Hana Version:

Database: SAP HANA 2.0 SPS 03 Database Maintenance Revision  
 024.03(2.00.024.03.1527766375)

1. Download the required software of HANA 2.0(**IMDB\_SERVER20\_024\_3-80002031.SAR**)

```

```

Do you want to specify additional components location? (y/n) [n]: n
Choose an action
Index | Action          | Description
-----|-----|-----
1    | ASP (update)     | Update SAP HANA Database version 2.00.052.00.1599235305
    |                  | sreaspsn (Database Worker (worker))
2    | install          | Install new system
3    | extract_components | Extract components
4    | Exit (do nothing) |
Enter selected action index [4]: 1
Processing software locations from pending update...
Pending update cannot be resumed with the persisted parameters. New update process will be started.
Pending update started with SAP HANA Lifecycle Management version '2.5.41.0' cannot be resumed with version '2.5.49.0'
SAP HANA Database installation kit '2.5.41.0' required.
Choose components to be installed or updated:
Index | Components | Description
-----|-----|-----
1    | all        | All components
2    | server     | Update SAP HANA Database from version 2.00.052.00.1599235305 to version 2.00.054.00.1611906357
3    | client     | Update SAP HANA Database Client from version 2.5.109.1598303414 to version 2.8.20.1619811438

```

**Same Repeat to the Primary Server and update the DB Client as well.**

**Don't FORGET to check the REPLICATION STATUS.**
